DETAILED ACTION

This action is in response to the communication filed 3/1/2002

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a system for configuring a personal security device through the use of encrypted Application Protocol Data Unit commands, classified in class 713, subclass 189, subject matter wherein cryptography is used in the protection of the operation of a computer.
- II. Claims 19-31, drawn to a system for configuring a personal security device wherein cryptographic means are generated in a hardware security module, classified in class 380, subclass 44, subject matter including a detail of a predetermined digital sequence signal generator.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination I does not require generating cryptographic means. The subcombination II has separate utility such as generating cryptographic keys.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search

required for Group I, in class 710/105, is not required for Group II, and the search required for Group II, in class 380/44, is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
